

Group 1 – Project overview

Grido is an emerging Egyptian sustainable design brand that transforms palm waste materials (palm fronds and arjoun) into contemporary handmade décor and functional home products.

The brand originated as a community-based initiative in Aswan, focusing on training and empowering women artisans. It is currently transitioning into a structured commercial brand targeting expansion into Cairo through both B2B and B2C channels.

Grido operates at the intersection of:

1. Sustainability (upcycling palm waste).
2. Heritage craftsmanship (Nubian & Upper Egyptian roots).
3. Contemporary design aesthetics.
4. Social impact (women economic empowerment).
